Website Review for Lefkoşa Turkish Municipality

**Prepared by: Azad renas gunasan **Date:11.08.2026

What Is Working Well?

- **Good keyboard navigation:** Visitors can move between interactive elements using the keyboard, and the selected elements are clearly highlighted.
- **Clear search feedback:** When no search results are found, the website displays a message informing visitors that no results are available.

The Three Things to Fix First

1. Show Visitors When a Page Is Loading

What visitors experience: When the website is opened using a slow internet connection, visitors may see a blank white screen.

Why it matters: Visitors may think the website is not working and leave before the page finishes loading.

What to ask the web developer to do: Add a simple loading animation or a message such as "Please wait, the page is loading."

How to check: Open the website using a slow internet connection and check whether a loading message appears.

2. Make Form Labels Easier to Use

What visitors experience: Clicking on a form label does not move the cursor to its corresponding field.

Why it matters: This can make filling out forms less convenient, especially for visitors who use accessibility tools.

What to ask the web developer to do: Make sure each form label is properly connected to its input field.

How to check: Click on each form label and check whether the cursor moves to the correct field.

3. Provide Clear Form Error Messages

What visitors experience: When a required field is left empty, it is highlighted in red, but no clear explanation is shown.

Why it matters: Visitors may not understand what they need to correct before submitting the form.

What to ask the web developer to do: Display a short message explaining which required field needs to be completed.

How to check: Leave a required field empty and press submit. Check whether a clear explanation appears.

Closing

Thank you for providing an important online service to the residents of Lefkoşa. These improvements could make the website easier to use and help visitors access municipal services more comfortably.
